

- Create a folder named *superior\_frm* on a memory stick (control unit will search for this folder)
  - Unpack the file *SPR0-X\_X-Y\_YN.cab* in this folder
  - Insert USB memory stick in USB connection Brain ('B' on figure 1)
  - Go to 'menu' (see figure 2)
  - Go to 'Software upgrade' ('New software available'; see figure 3)  
*Note: 'New software available' might not be visible going to the menu. But pressing on 'Software upgrade' will show the display as shown in figure 4.*
  - Press 'Install' (see figure 4)
  - Wait for upgrading (see figure 5)
  - After upgrading is finished, unit will go to Home.
  - Put the unit into 'standby' (or the status is already 'standby').
  - The HV module will be upgraded automatically: display is showing 'HV module upgrading' (figure 7)
  - After upgrading, the unit will go back to 'standby' (like in figure 6)
- Check Software version: this should be the same as the downloaded version. (figure 8)  
*For control unit without Wifi SPR0.X.X, for control unit with Wifi SPR0.Y.YN.*
